ABSTRACT

A final assignment repository is a medium or place for storing final assignments and theses in the form of PDF files (Portable Document Format). At the end of each semester, students must receive a final assignment course for the D3 level. In each university, the final assignment system is often different, but most still use the manual method. When a student's thesis trial and final assignment are printed, it is used as a book as proof that they have completed the thesis or final assignment. For the collection of thesis books, students are required to collect them in the library; often, other students look for study references and assignments in the reading room. For that reason, the author's problem is trying to design a website-based final project repository application using the Laravel framework. This application was built to store student final assignments. In this case, students can easily save the final project file. In this application, the reading room admin plays the role of manager of the final assignment file if students who have submitted it validate that the student has collected it. Majoring students can use this application to access applications that can be used as learning tools or references for their final project. A computerized system is expected to provide convenience and produce applications as expected.

I. Introduction

A repository is a place to store various kinds of programs or applications that have been made in such a way that they can be accessed via the internet. This repository system is very helpful for the academic section in compiling and storing the final assignments of South Aceh Polytechnic students easily [1]. South Aceh Polytechnic students who have completed their final project must submit the results in the form of a hardcopy final project and also a CD containing the final project files (softcopy) to study program staff and library staff for data collection and archiving. Every year, the South Aceh Polytechnic produces quite a number of graduates, so the number of final projects submitted is increasing. The problem is that the submitted final project is stored and compiled in the library filing cabinet. Students who need final assignments must search one by one in the library filing cabinets. Another problem that arises is if, by chance, the required final assignment is being borrowed by another student, then they have to wait until the borrower returns the final assignment. Based on these problems, the author is interested in making a final project entitled "Repository Information System for the Final Assignment of the South Aceh Polytechnic" This repository information system is made to make it easier for students who want to find references when determining the title of the final project. It is hoped that with this repository information system, students who need their final semester assignments first won't have to bother going to the library and borrowing them.

II. Method

A. Flowchart Diagram

Flowchart is a chart with certain symbols that describe the sequence of processes in detail and the relationship between a process (instructions) and other processes in a program.

1. Admin Flowchart Diagram

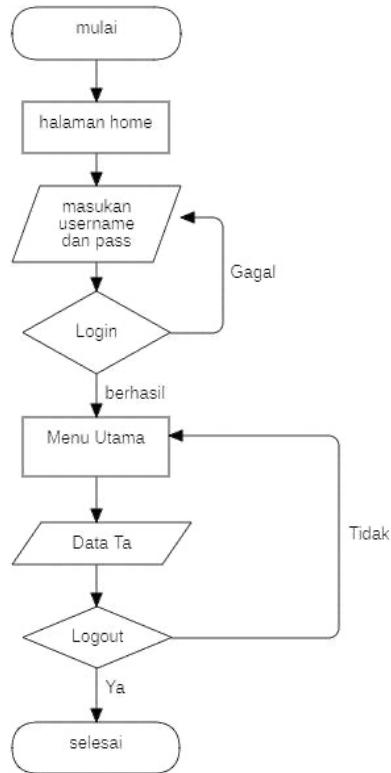

Fig.1. Admin Flowchart

2. User Flowchart Diagram

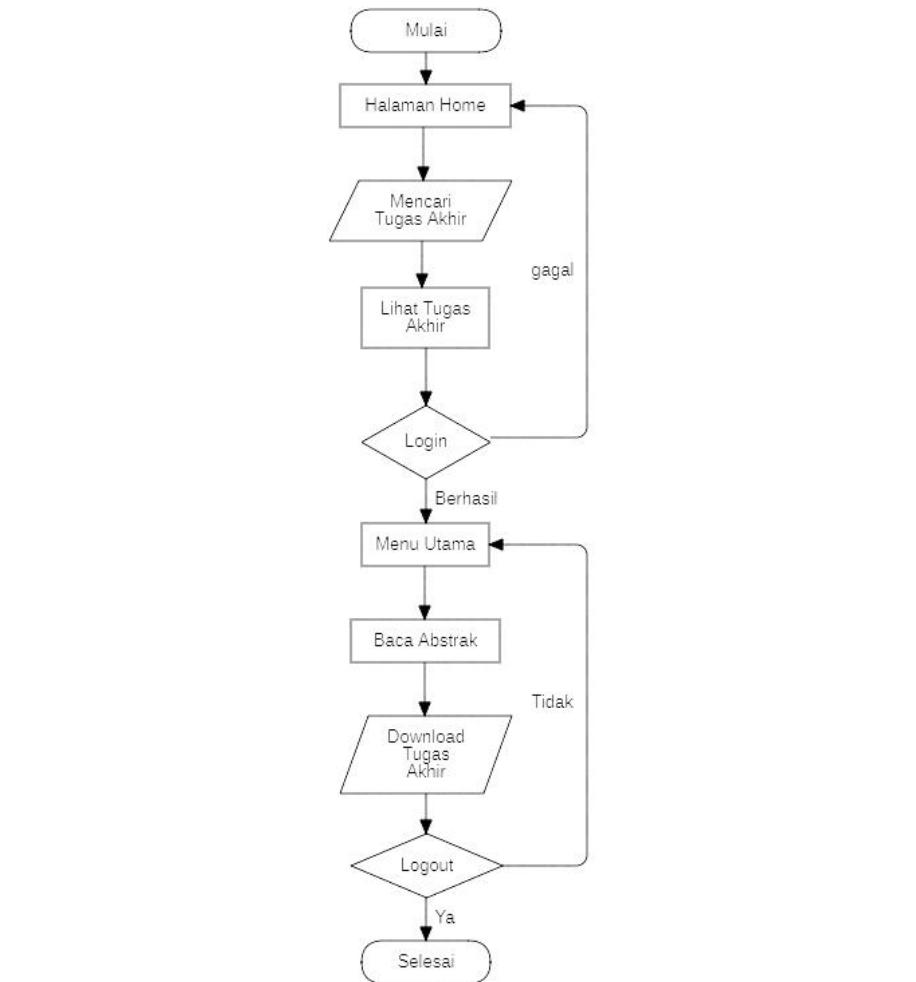

Fig. 2. Flowchart Diagram User

B. Use Case Diagram

The user can login to the page, the user can see the final project he is looking for, the user can download the final assignment, then the user can log out. In contrast to the admin, the admin can log in, then the admin can process data such as inputting student data, lecturer data or inputting final assignments that have been submitted.

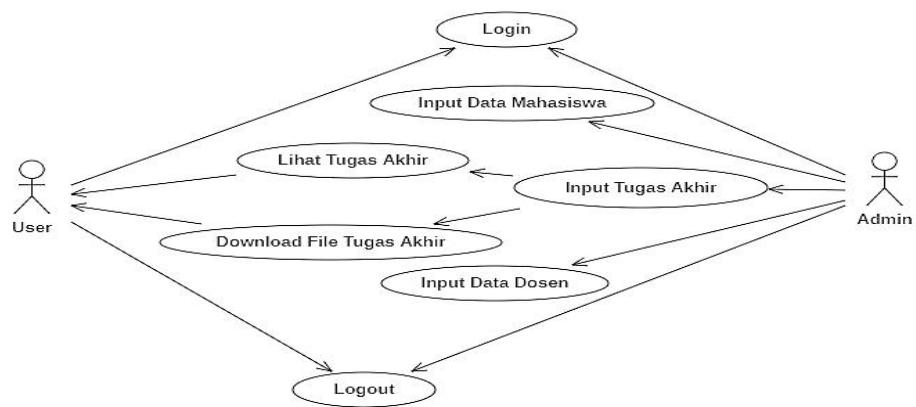

Fig. 3. Use Case Diagram

C. Home Page's Display

On the dashboard of this home page, users can search for the final assignment of the previous semester by typing the title of the final assignment in the search field, can be seen from the figure below.

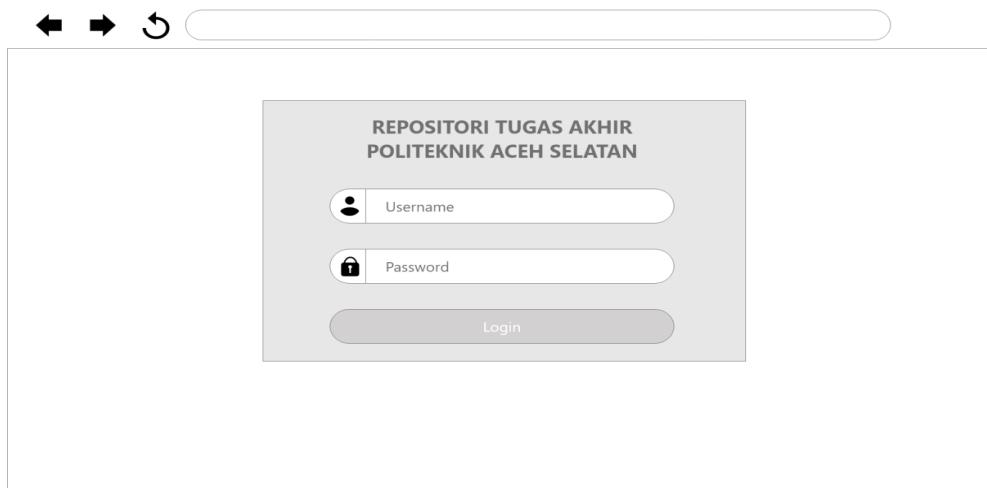

The screenshot shows the homepage of the 'REPOSITORY TUGAS AKHIR POLITEKNIK ACEH SELATAN'. At the top, there are navigation icons (back, forward, search). The header includes the repository name and links to 'BERANDA', 'TENTANG', and 'DAFTAR/MASUK'. Below the header is a search bar with the placeholder 'Pencarian Tugas Akhir Dan Jurnal Mahasiswa Politeknik Aceh Selatan' and a 'Cari' button. To the left, there is a sidebar with filters for 'Full Text', 'Kategori' (with radio buttons for 'Tugas Akhir' and 'Tugas Akhir'), 'Tahun Terbit', and 'Prodi'. The main area contains several horizontal lines for search results, with a 'Lihat Selengkapnya' button at the bottom right.

Fig. 4. Home Page's Display

D. Login Page's Display

The figure below shows the design of the login page used by the user. This display is the last step before entering the application system.

The screenshot shows the login page of the repository. It features a central box with the text 'REPOSITORY TUGAS AKHIR POLITEKNIK ACEH SELATAN'. Inside this box are three input fields: 'Username' with a user icon, 'Password' with a lock icon, and a 'Login' button at the bottom.

Fig. 5. Login Page's Display

E. Admin Dashboard Page's Display

On the admin dashboard, we can process data, such as entering or updating existing final assignments, can be seen from the figure below.

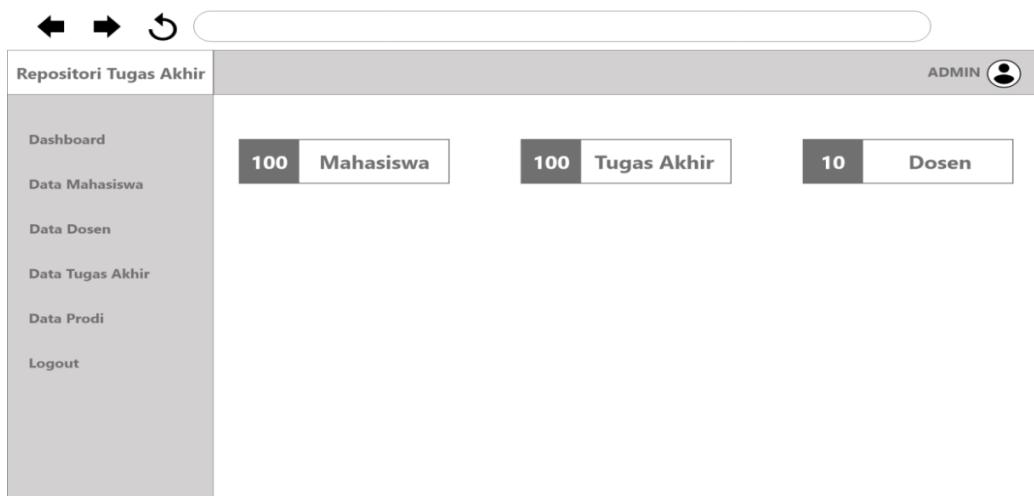

Fig. 6. Admin Dashboard Page's Display

III. Results and Discussion

A. Home Page's Implementation

The home page is the initial page when the admin or user enters the web, as shown below.

Fig.7. Home Page's Display

B. Login Page

The login page is the destination for admins and users to log in. This page is the initial display of the final project repository application; the following is the login page display.

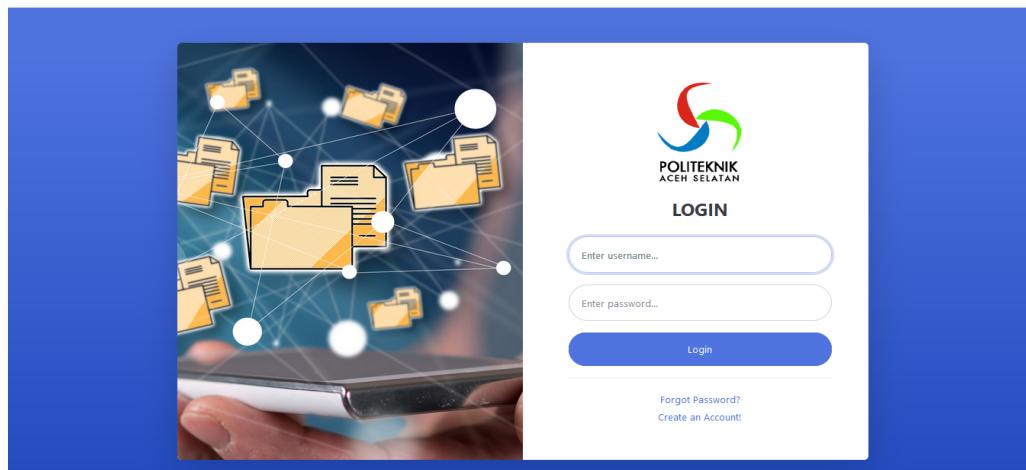

Fig. 8. Login Page

C. Repository Page's Display

On this page, there is the final project you want to find. The following is the display of the final project repository page.

Detail Repository

Aplikasi Inventarisasi Software Pada Dinas Komunikasi Informatika dan Persandian Kabupaten Aceh Selatan

Author: Admin
Program Studi:
Nama: Nia Salsabila
NIM: 1902013
Pembimbing 1: Fardiansyah, ST., MT
Pembimbing 2: Sera Delta Tanjung, Spd.I, Mp.d

Dalam penelitian ini dibuat sebuah sistem informasi berbasis aplikasi web dan database untuk menginventarisasi data software pada Dinas Komunikasi Informatika dan Persandian Kabupaten Aceh Selatan. Aplikasi inventarisasi software ini dibentuk dengan sistem terintegrasi dengan aplikasi web sebagai media interaktif dan database sebagai media penyimpanan data. Dimana pengecekan data software yang selama ini dilakukan secara manual, namun saat ini dapat dilakukan dengan lebih mudah, praktis dan setiap pegawainya dapat mencari data inventarisasi software dengan cepat. Sistem

G. FAQ Display

Here is the FAQ data display.

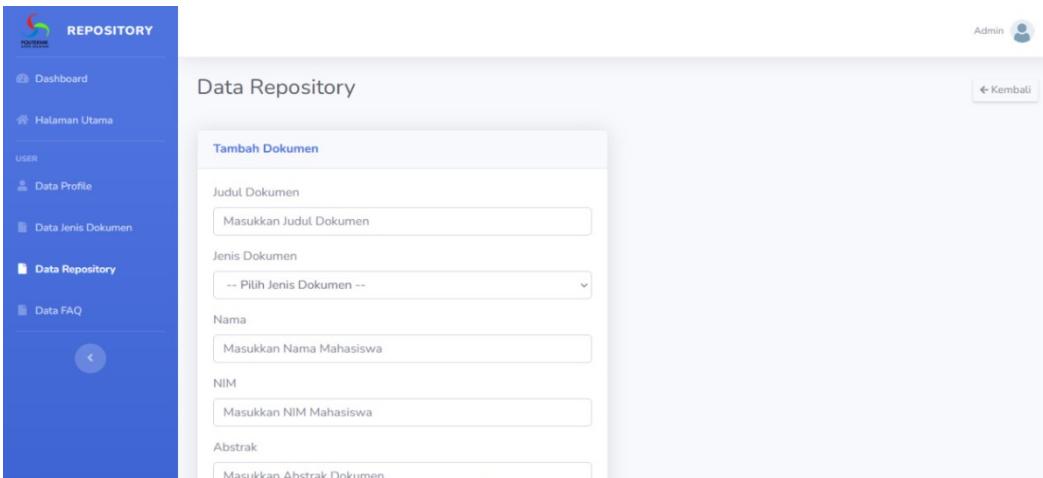

Fig. 13. FAQ Display

IV. Conclusions

The conclusions from all the results and reports from the application are as follows:

1. This system will aid and facilitate the academic section of South Aceh Polytechnic in recording and storing final assignments, as well as making it easier for South Aceh Polytechnic students to locate their final assignments.
2. This application was created so that the South Aceh Polytechnic has a final assignment repository information system.
